globalpayments

- Real-time, seamless customer checkout experience
- Quick and easy integration process for HTML pages
- Maintain identical design of merchant Web site on checkout page

PAYMENT PROCESSING

Global Transport® – Secure Page

SECURE, SEAMLESS CARDHOLDER CHECKOUT EXPERIENCE FOR ECOMMERCE SHOPPERS

Global Transport – Secure Page is a secure, cloud-based solution for processing credit card transactions from merchant eCommerce Web sites. The product uses patented HTML Clone® technology to maintain the design, look and feel of the merchant's Web site for a seamless checkout process. Merchants can update branding and the changes will automatically flow through to the payment page in real time. Web site maintenance is significantly reduced and design continuity between the Web site and the payment page reduces order abandonment and improves sales.

The integration process is designed to be quick and easy for any Webmaster. HTML code samples are provided for insertion into the eCommerce Web site's checkout section. When complete, the Webmaster follows simple instructions to connect the eCommerce site to the Global Transport Gateway.

Typical eCommerce Web sites that accept sensitive cardholder information are required to undergo a PCI security audit. With Global Transport – Secure Page, customers are redirected to a secure data center provided by Global Payments when submitting payment information. Sensitive cardholder data is never present in the merchant environment, thereby reducing the typical cost of maintaining PCI compliance.

FEATURES	BENEFITS
Merchants do not collect or store sensitive cardholder data	Significant reduction or elimination of PCI compliance costs
HTML Clone® technology presents customers with a payment page appearing identical to the merchant's Web site in real time	Consumers never feel like they left the merchant's Web site, reducing order abandonment rates
Any changes to the Web site are reflected immediately by the hosted payment page during the checkout process	Merchants are able to avoid maintenance to hosted payment pages when performing updates to their Web sites
Quick, fast to market integration	Certification to Global Payments is not required
Global Transport – Virtual Terminal is included, providing near real-time, sophisticated browser-based transaction management, reporting and archival capabilities	Operational efficiency is increased by reducing time consuming, manual transaction lookup efforts
